● CD Player Service Precautions

1. For pickup unit(CXX1230) handling, please refer to "Disassembly"(CX-597 Service Manual CRT1829). During replacement, handling precautions shall be taken to prevent an electrostatic discharge(protection by a short pin).
2. During disassembly, be sure to turn the power off since an internal IC might be destroyed when a connector is plugged or unplugged.
3. Please checking the grating after changing the service pickup unit(see page 59).

1. SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely; you should not risk trying to do so and refer the repair to a qualified service technician.

1. Safety Precautions for those who Service this Unit.

- When checking or adjusting the emitting power of the laser diode exercise caution in order to get safe, reliable results.

Caution:

1. During repair or tests, minimum distance of 13cm from the focus lens must be kept.
 2. During repair or tests, do not view laser beam for 10 seconds or longer.
2. A "CLASS 1 LASER PRODUCT" label is affixed to the rear of the player.
 3. The triangular label is attached to the mechanism unit frame.

4. Specifications of Laser Diode

Specifications of laser radiation fields to which human access is possible during service.
Wavelength = 800 nanometers

2. EXPLODED VIEWS AND PARTS LIST

2.1 PACKING

Fig. 1

NOTE:

- Parts marked by "*" are generally unavailable because they are not in our Master Spare Parts List.
- Screws adjacent to ∇ mark on the product are used for disassembly.

3. SCHEMATIC DIAGRAM

3.1 OVERALL CONNECTION DIAGRAM(GUIDE PAGE)

Note: When ordering service parts, be sure to refer to “EXPLODED VIEWS AND PARTS LIST” or “ELECTRICAL PARTS LIST”.

A-b

NOTE:
 □ Symbol indicates a resistor.
 No differentiation is made between chip resistors and discrete resistors.
 □ Symbol indicates a capacitor.
 No differentiation is made between chip capacitors and discrete capacitors.

Decimal points for resistor and capacitor fixed values are expressed as:
 2.2-2R2
 0.022-0R22

The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

5. ELECTRICAL PARTS LIST

NOTES:

- Parts whose parts numbers are omitted are subject to being not supplied.
- The part numbers shown below indicate chip components.

Chip Resistor
RS1/○S○○○J,RS1/○○S○○○J
Chip Capacitor (except for CQS.....)
CKS....., CCS....., CSZS.....

6.2 CD SECTION

1)Precautions

- This unit uses a single power supply (+5V) for the regulator. The signal reference potential, therefore, is connected to REFO(approx. 2.5V) instead of GND.

If REFO and GND are connected to each other by mistake during adjustments, not only will it be impossible to measure the potential correctly, but the servo will malfunction and a severe shock will be applied to the pick-up. To avoid this, take special note of the following.

Do not connect the negative probe of the measuring equipment to REFO and GND together. It is especially important not to connect the channel 1 negative probe of the oscilloscope to REFO with the channel 2 negative probe connected to GND.

Since the frame of the measuring instrument is usually at the same potential as the negative probe, change the frame of the measuring instrument to floating status.

If by accident REFO comes in contact with GND, immediately switch the regulator or power OFF.

- Always make sure the regulator is OFF when connecting and disconnecting the various filters and wiring required for measurements.
- Before proceeding to further adjustments and measurements after switching regulator ON, let the player run for about one minute to allow the circuits to stabilize.
- Since the protective systems in the unit's software are rendered inoperative in test mode, be very careful to avoid mechanical and /or electrical shocks to the system when making adjustment.
- Test mode starting procedure
Switch ACC, back-up ON while pressing the 4 and 6 keys together.

- Test mode cancellation
Switch ACC, back-up OFF.

- Disc detection during loading and eject operations is performed by means of a photo transistor in this unit. Consequently, if the inside of the unit is exposed to a strong light source when the outer casing is removed for repairs or adjustment, the following malfunctions may occur.

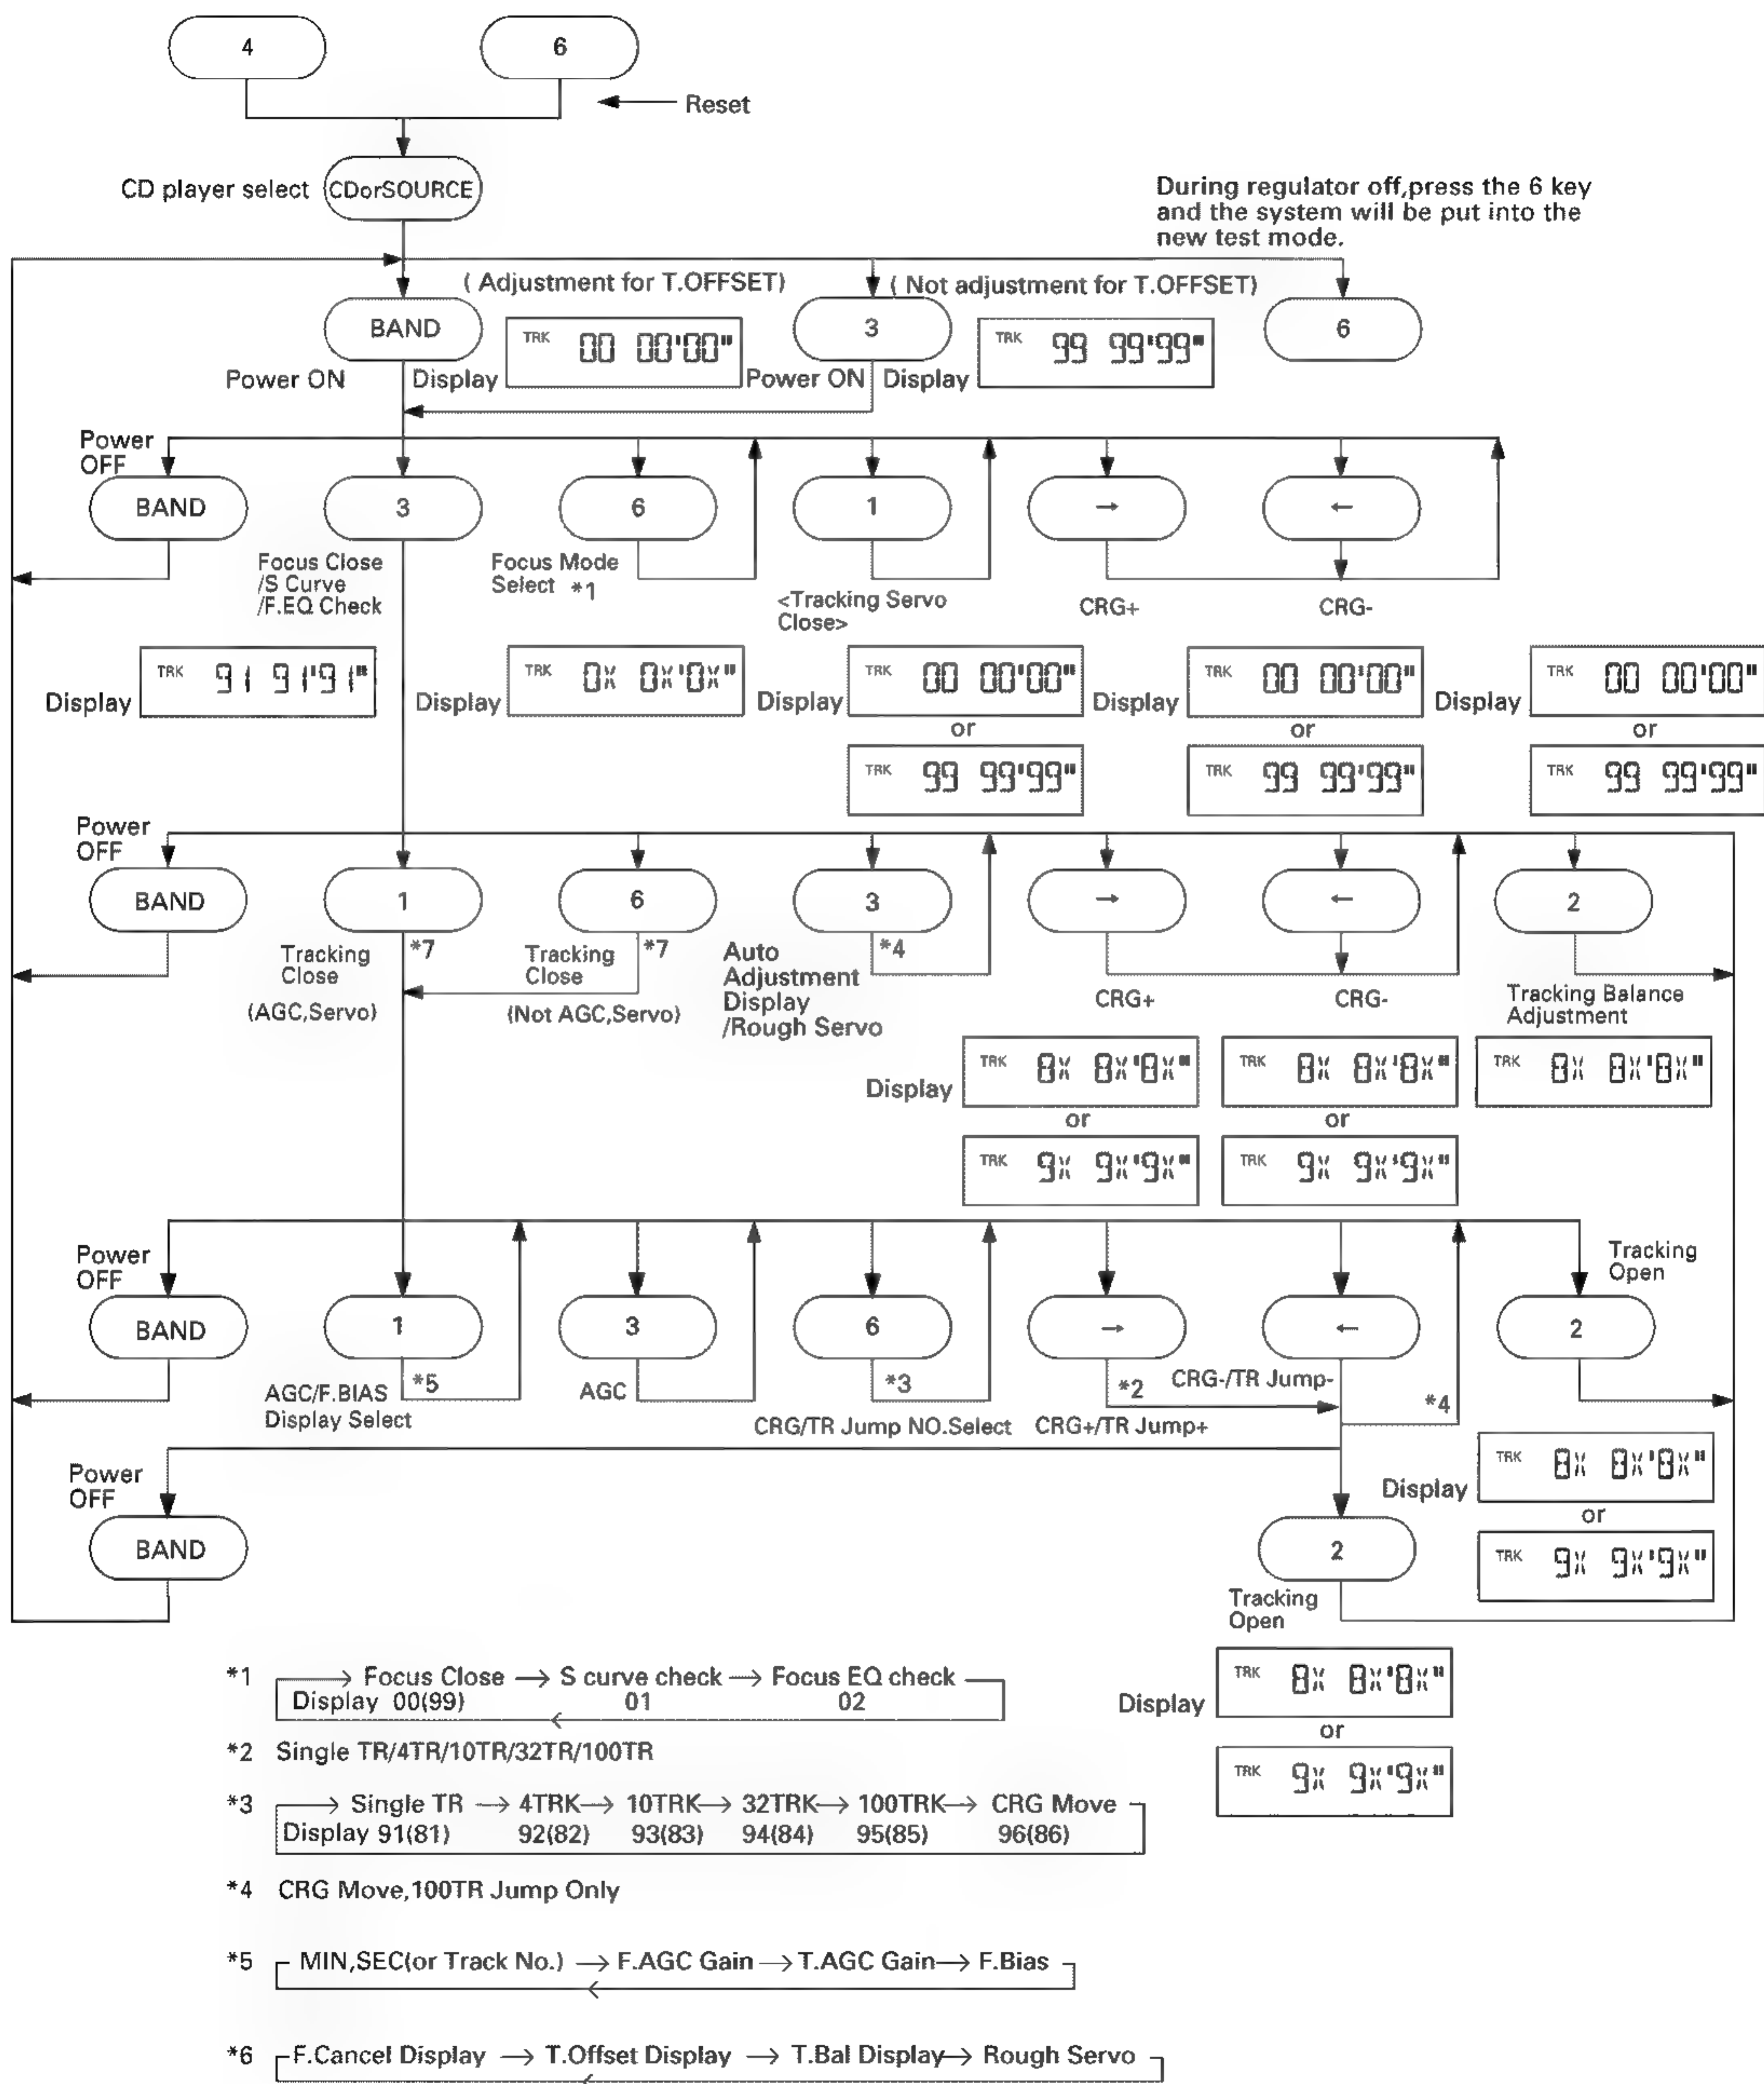

*During PLAY, even if the eject button is pressed, the disc will not be ejected and the unit will remain in the PLAY mode.

*The unit will not load a disc.

When the unit malfunctions this way, either re-position the light source, move the unit or cover the photo transistor.

- When loading and unloading discs during adjustment procedures, always wait for the disc to be properly clamped or ejected before pressing another key. Otherwise, there is a risk of the actuator being destroyed.
- Turn power off when pressing the button TR+ or the button TR- key for focus search in the test mode. (Or else lens may stick and the actuator may be damaged.)
- SINGLE/4TRK/10TRK/32TRK will continue to operate even after the key is released. Tracking is closed the moment C-MOVE is released.
- JUMP MODE resets to SINGLE as soon as power is switched OFF.

● Flow Chart

6.3 CHECKING THE GRATING AFTER CHANGING THE PICKUP UNIT

• Note :

Unlike previous CD mechanism modules the grating angle of the PU unit cannot be adjusted after the PU unit is changed. The PU unit in the CD mechanism module is adjusted on the production line to match the CD mechanism module and is thus the best adjusted PU unit for the CD mechanism module. Changing the PU unit is thus best considered as a last resort. However, if the PU unit must be changed, the grating should be checked using the procedure below.

• Purpose :

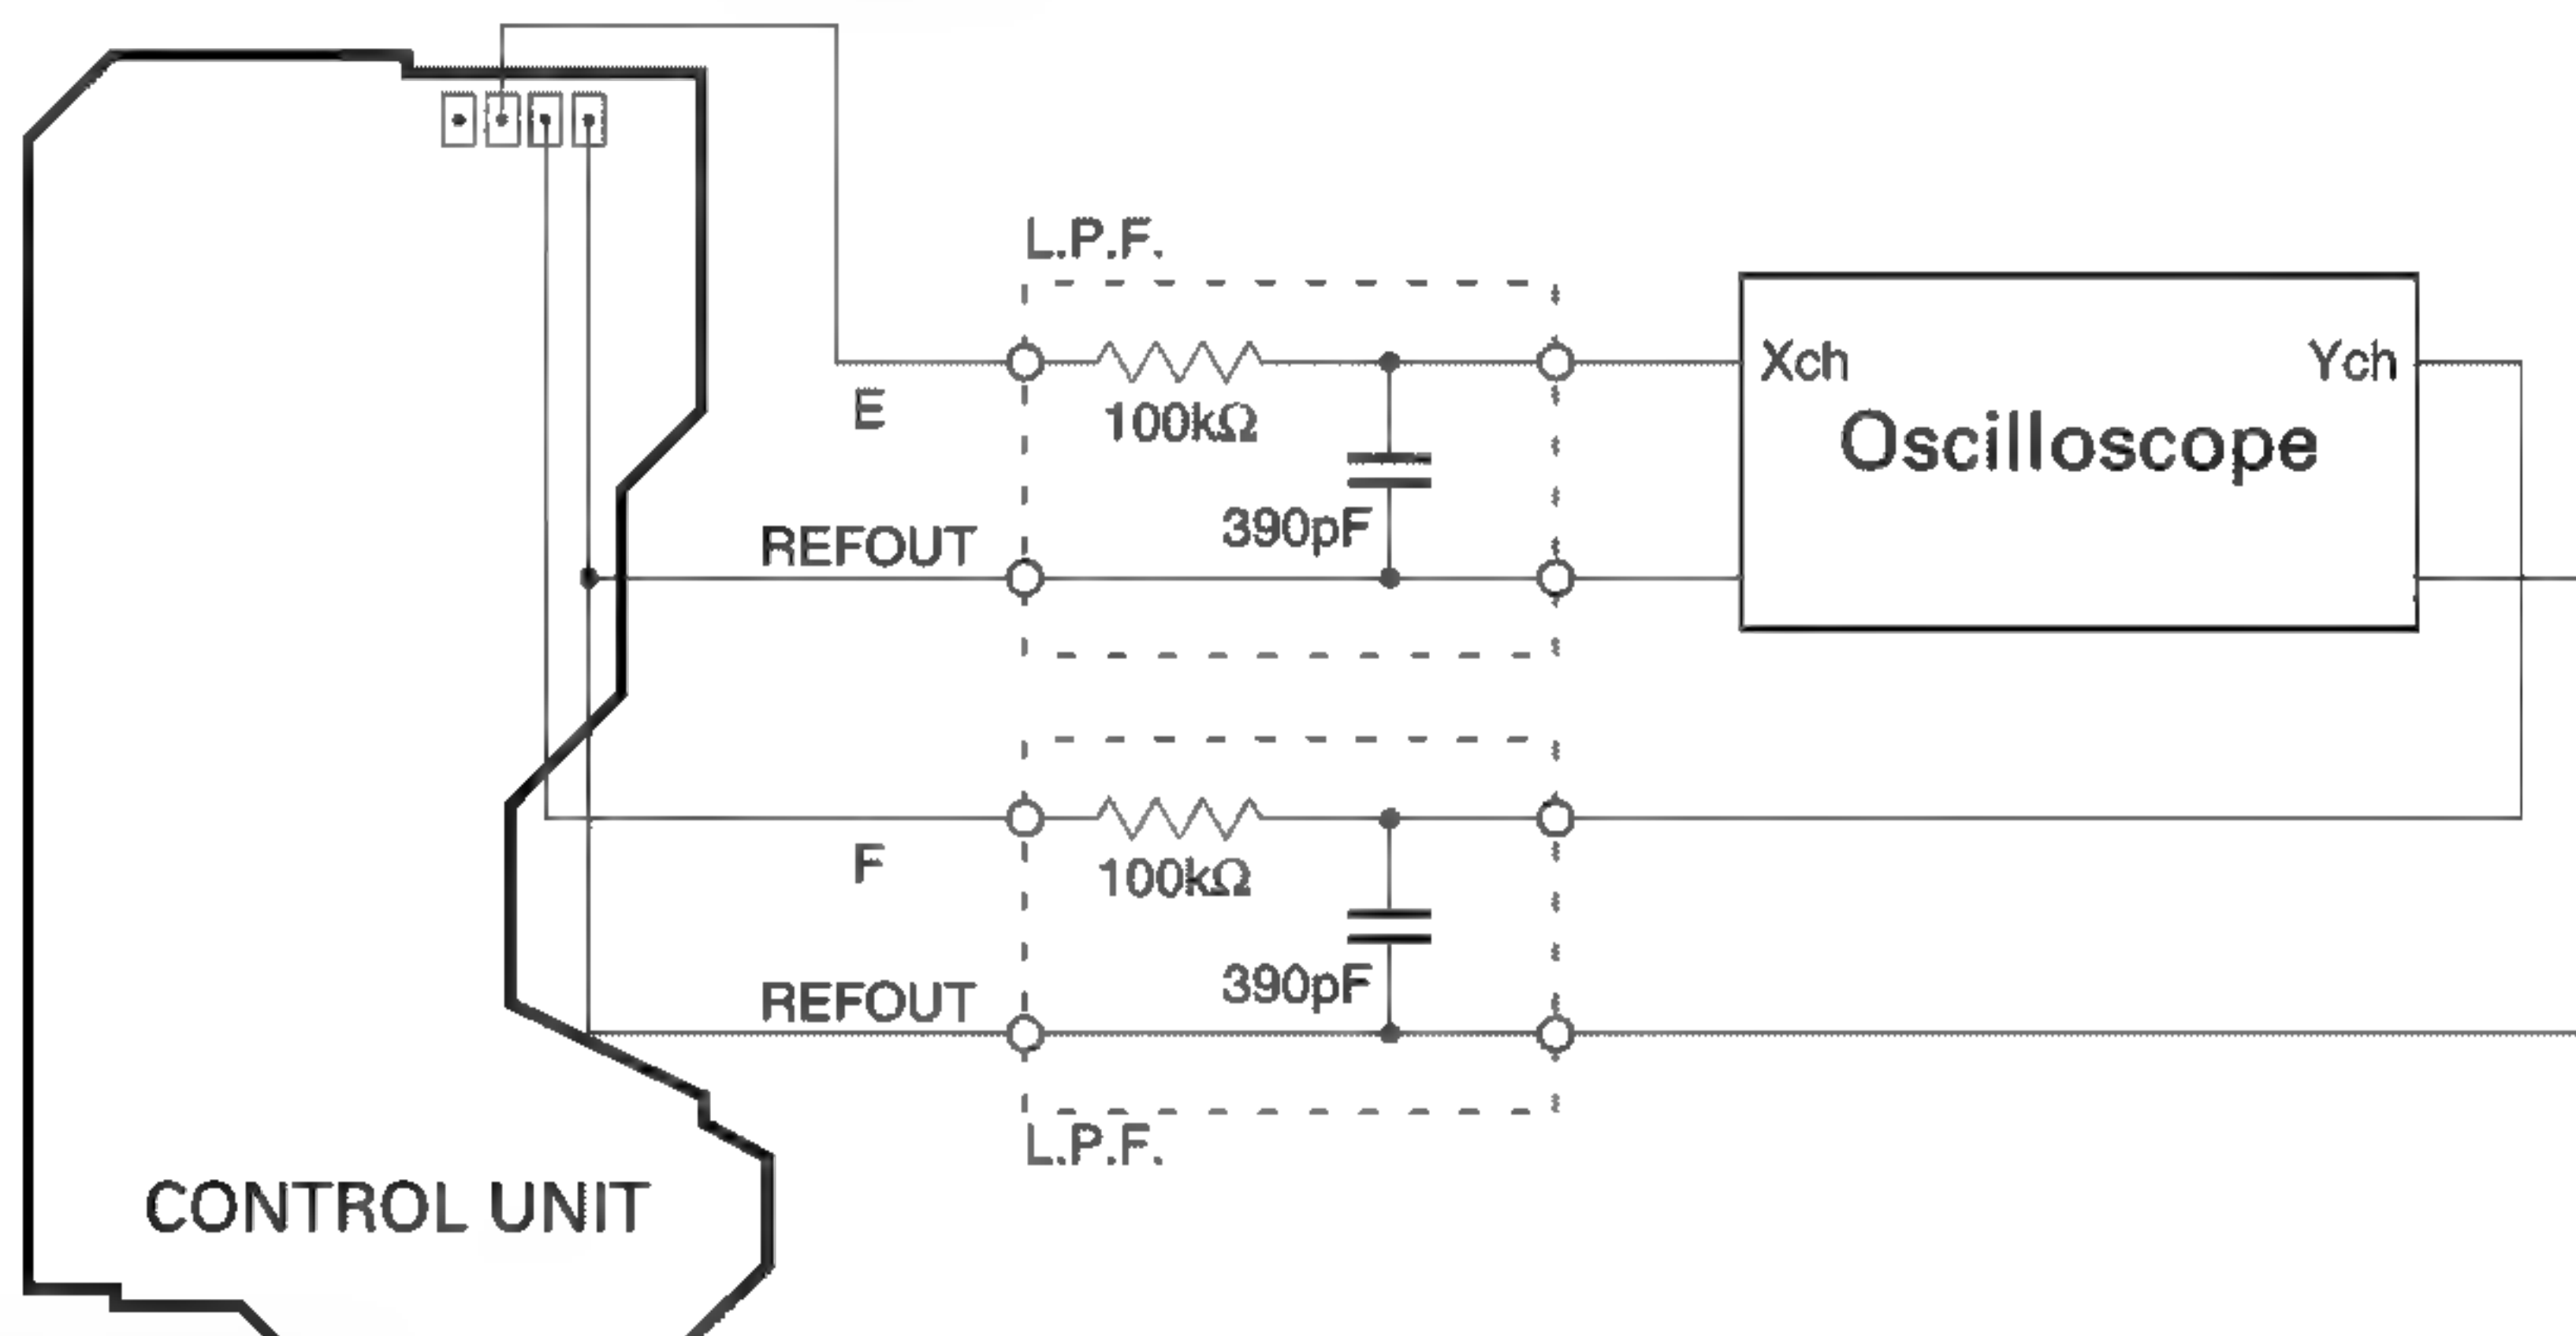

To check that the grating is within an acceptable range.

• Symptoms of Mal-adjustment :

If the grating is off by a large amount symptoms such as being unable to close tracking, being unable to perform track search operations, or track searching taking a long time, may appear.

• Method :

- | | |
|-----------------------|----------------------------|
| • Measuring Equipment | • Oscilloscope, Two L.P.F. |
| • Measuring Points | • E, F, REFOUT |
| • Disc | • ABEX TCD-784 |
| • Mode | • TEST MODE |

• Checking Procedure

1. In test mode, load the disc and switch the 5V regulator on.
2. Using the **TR+** and **TR-** buttons, move the PU unit to the innermost track.
3. Press key 3 to close focus, the display should read "91". Press key 2 to implement the tracking balance adjustment the display should now read "81". Press key 3 4 times. The display will change, returning to "81" on the fourth press.
4. As shown in the diagram above, monitor the LPF outputs using the oscilloscope and check that the phase difference is within 75°. Refer to the photographs supplied to determine the phase angle.
5. If the phase difference is determined to be greater than 75° try changing the PU unit to see if there is any improvement. If, after trying this a number of times, the grating angle does not become less than 75° then the mechanism should be judged to be at fault.

• Note

Because of eccentricity in the disc and a slight misalignment of the clamping center the grating waveform may be seen to "wobble" (the phase difference changes as the disc rotates). The angle specified above indicates the average angle.

• Hint

Reloading the disc changes the clamp position and may decrease the "wobble".

DEH-345R,344R,343R

Grating waveform

Ech → Xch 20mV/div, AC
Fch → Ych 20mV/div, AC

● Pin Functions (UPD63702AGF)

Pin No.	Pin Name	I/O	Function and Operation
1	D.VDD		Supplies current of positive voltage to the logic circuits
2	RST	I	System reset input pin
3	AO	I	Microcomputer interface AO="L": STB active and set to address register AO="H": STB active and set to parameter
4	STB	I	Signal to latch serial data within the LSI
5	SCK	I	Clock input pin to input and output serial data
6	SO	O	Outputs serial data and status signal
7	SI	I	Serial data input pin
8	D.GND		Logic circuit GND
9	X.GND		Crystal oscillation circuit GND
10	XTAL	I	Crystal oscillator connection pin
11	XTAL	O	Crystal oscillator connection pin
12	X.VDD		Supplies current of positive voltage to the crystal oscillation circuit
13	DA.VDD		Supplies current of positive voltage to the D/A converter
14	R+	O	Right channel analog audio data output pin
15	R-	O	Right channel analog audio data output pin
16,17	DA.GND		D/A converter GND
18	L-	O	Left channel analog audio data output pin
19	L+	O	Left channel analog audio data output pin
20	DA.VDD		Supplies current of positive voltage to the D/A converter
21	D.VDD		Supplies current of positive voltage to logic circuit
22	FLAG	O	Flag output pin to indicate that audio data currently being output consists of noncorrectable data
23	WDCK	O	Pin to output double the frequency of LRCK
24	C16M	O	Pin to output the clock
25	EMPH	O	Output pin for the pre-emphasis data in the sub-Q code
26	DIN	I	Input pin for serial audio data
27	DOUT	O	Output pin for the serial audio data
28	SCKO	O	Output pin for the clock for the serial audio data
29	LRCK	O	Signals to distinguish the right and left channels of the audio data output from DOUT. Frequency is 44.1kHz at 50% duty at normal regeneration
30	TX	O	Output pin for the digital audio interface data
31	CTLV	I	Oscillation control pin for high-frequency clock generation VCO used for the digital PLL upon regeneration at fast speed of 2- or 4-fold
32	POUT	O	Output point for phase comparison
33	D.GND		GND for the logic circuit
34	VCO	I	Input pin for the inverter
35	VCO	O	Output pin for the inverter
36	D.VDD		Supplies current of positive voltage to the logic circuit
37	PLCK	O	Pin for monitoring the bit clock
38	LOCK	O	Indicates "H" when the synchronized pattern detection signal matches the frame counter output at the EFM recovery modulation, and "L" when they don't match
39	WFCK	O	Minute-cycle signal for the bit clock, the signal indicates the cycle of 1 frame (approx. 7.35kHz)
40	RFCK	O	Minute-cycle signal for the clock, the signal indicates cycle of 1 frame (approx. 7.35kHz)
41	D.GND		GND for the logic circuit
42,43	TEST0,1	I	Test pins
44,45	TM2, TM4	I	Pins for controlling regeneration at fast speed of 2- or 4-fold
46-49	T4-T7	I	Test pins
50,51	C1D1, C1D2	O	Output pin for indicating the C1 error correction results
52-54	C2D1-C2D3	O	Output pin for indicating the C2 error correction results
55	D.VDD		Supplies current of positive voltage to the logic circuit
56	SFSY	O	Outputs 1 word of the subcode. Generally, 1 cycle is approx 136 micro seconds
57	SBSY	O	The signal indicates the beginning of the subcode block. The SFSY signal is output at high level every 98 times
58	SBSO	O	Output pin for the subcode data

Pin No.	Pin Name	I/O	Function and Operation
59	SBCK	I	Input pin for the clock signal for read-out of the subcode data
60	A.GND		GND for the analog circuit
61	MD	O	Output pin for the spindle drive
62	SD	O	Output pin for the sled drive
63	TD	O	Output pin for the tracking drive
64	FD	O	Output pin for the focus drive
65	FBAL	O	Output pin for the focus balance control
66	TBAL	O	Output pin for the tracking balance control
67	A.VDD		Supplies current of positive voltage to the analog circuit
68	TBC	I	Switches coefficient banks for the tracking filter
69	EFM	I	Input pin for the EFM signal
70	HOLD	I	Input pin for the hold control signal
71	RFOK	I	Input pin for the RFOK signal
72	MIRR	I	Input pin for the MIRR signal
73	A.GND		GND for the analog circuit
74	HOME	I	Home position detector input
75	VR1	I	The signal input through these pins is digitized to 8-bit by the A/D converter, which by operation of the assigned register, can be read into the microcomputer
76	FE	I	Inputs a focus-error signal from the RF amplifier
77	TE	I	Inputs a tracking-error signal from the RF amplifier
78	TEC	I	Input pin for the tracking comparator
79	REFOUT	O	Output point for midpoint potential for the A/D converter for the LSI portion
80	A.VDD		Supplies current of accurate voltage to the analog circuit

*UPD63702AGF

IC's marked by* are MOS type.

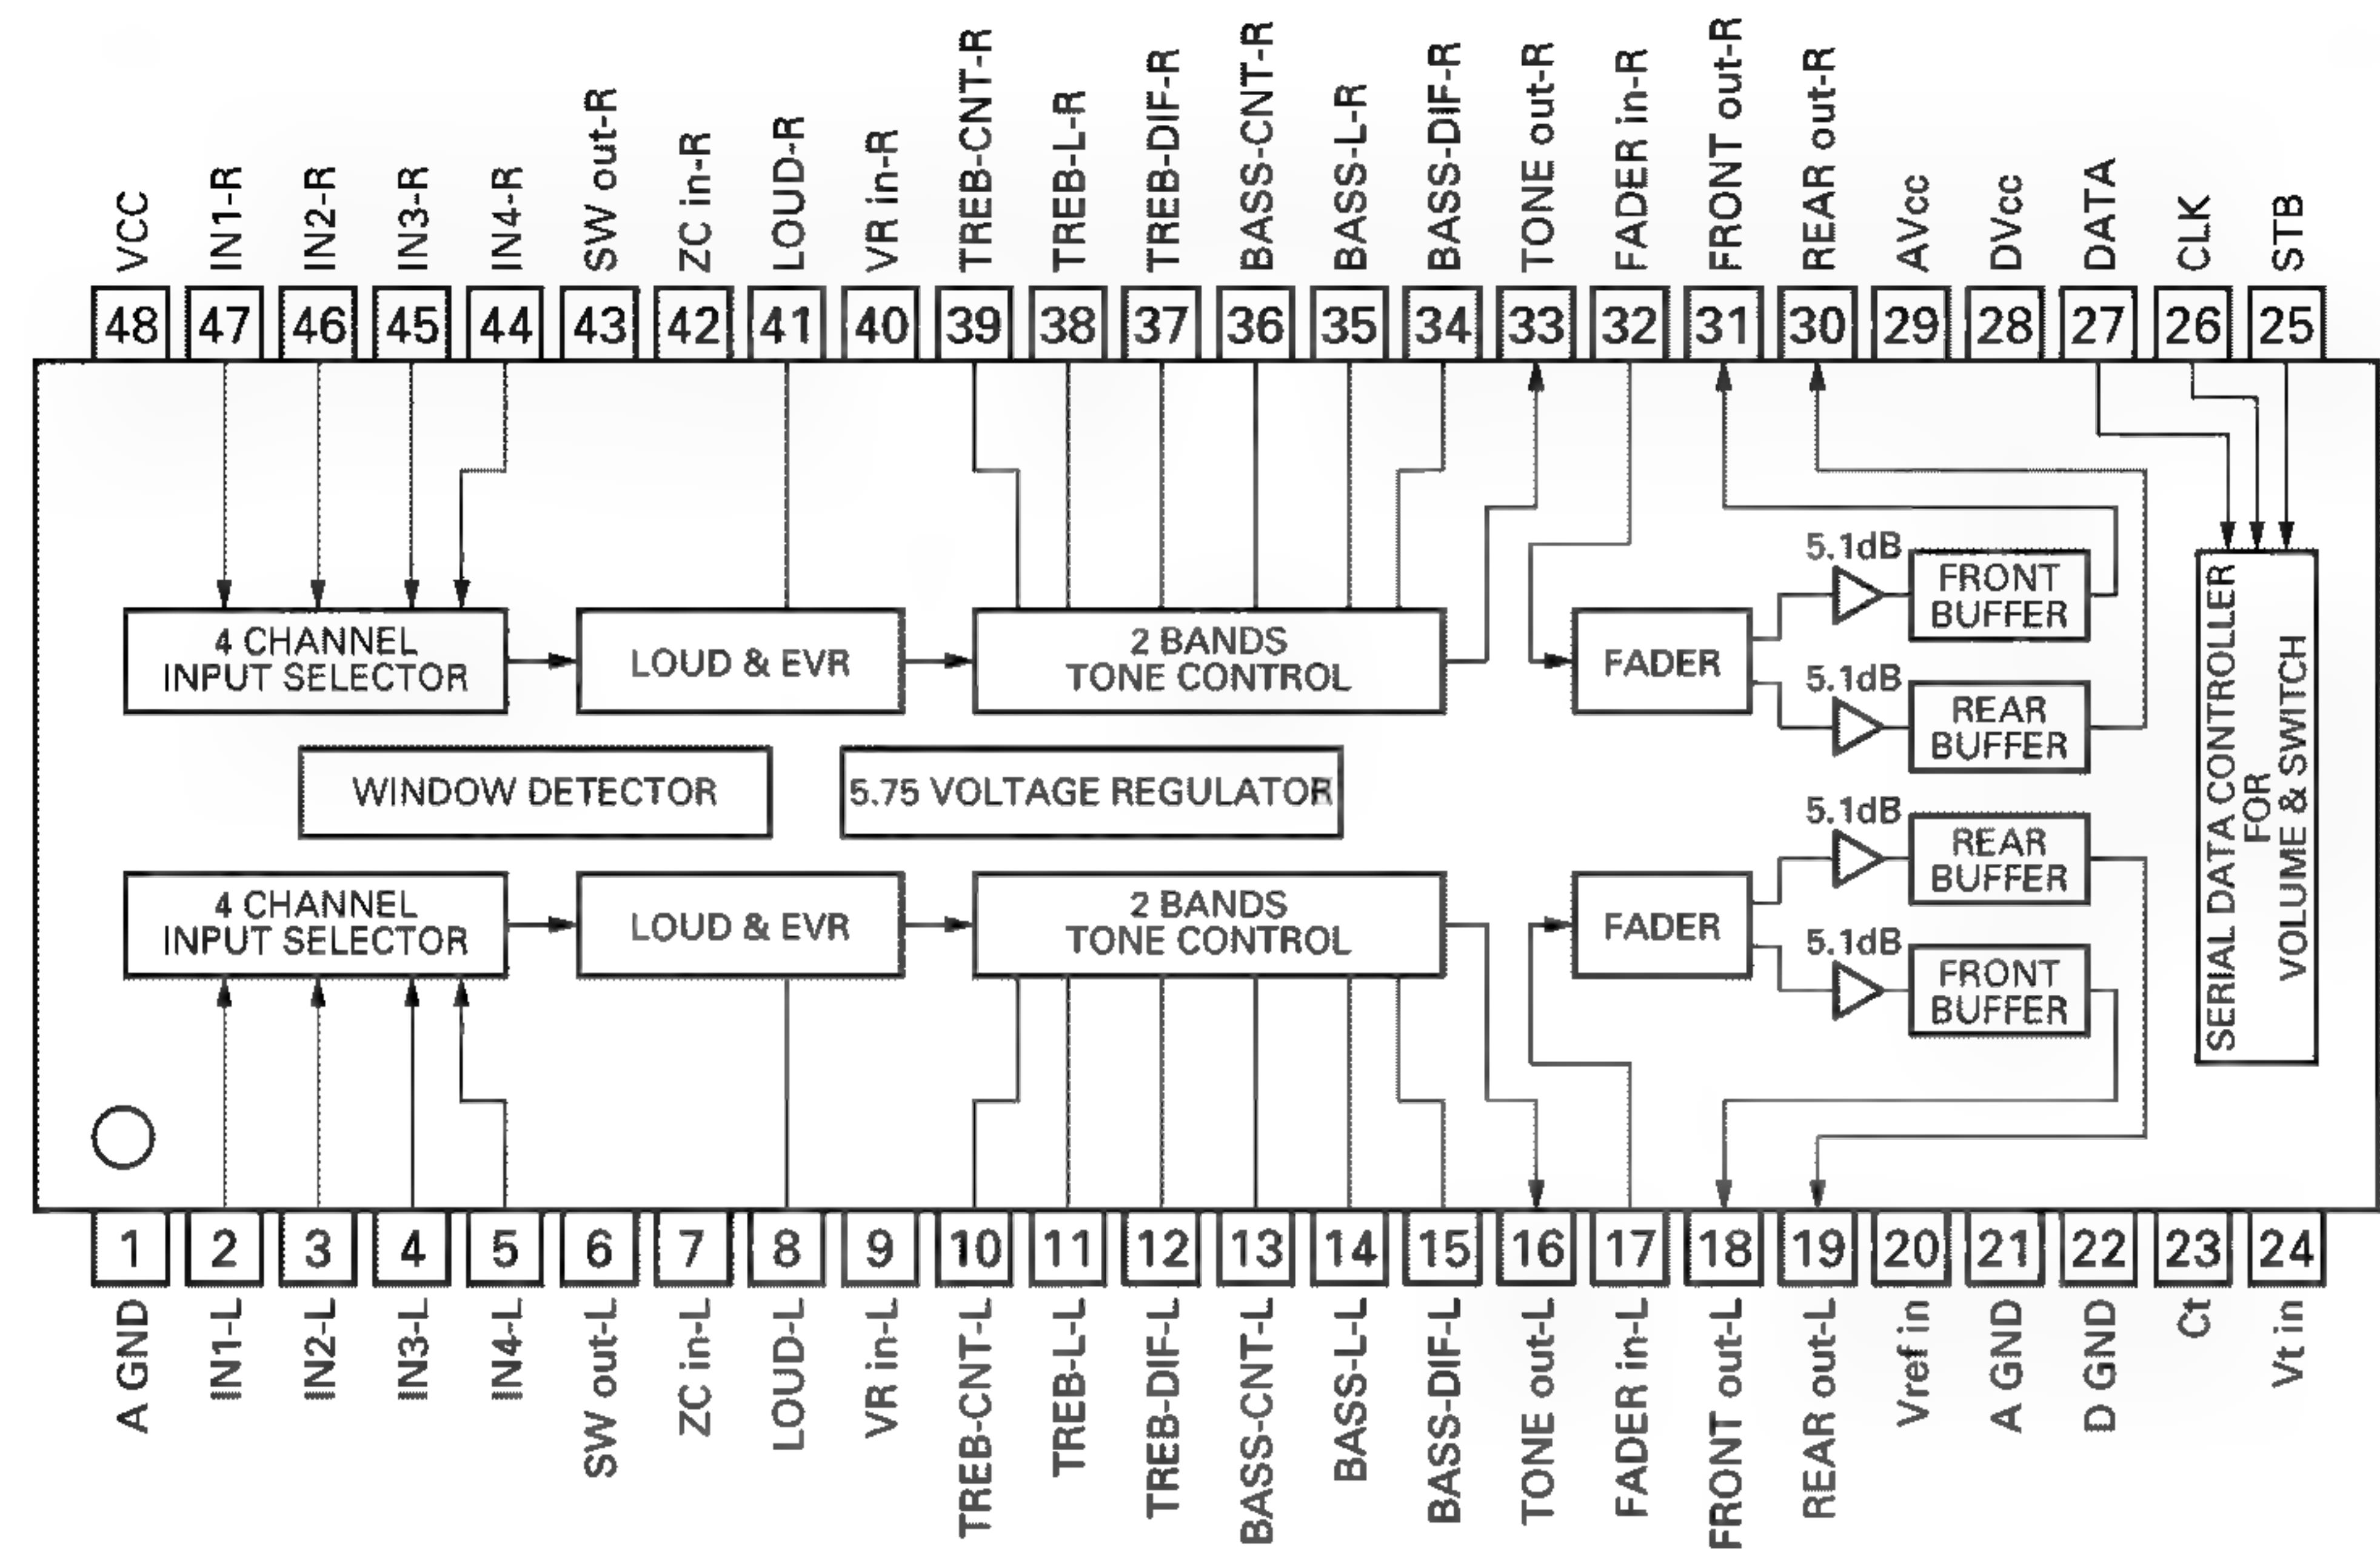

Be careful in handling them because they are very liable to be damaged by electrostatic induction.

7.1.2 DISPLAY

● CAW1453

COMMON

Fig. 24

7.2 DIAGNOSIS

7.2.1 DISASSEMBLY

1. Removing the Case (Fig.25)
2. Removing the Detach Grille Assy(Fig.26)
3. Removing the Panel Assy(Fig.26)

4. Removing the CD Mechanism Module

5. Removing the Chassis Unit

7.2.2 TEST MODE

● Error Number Indication

The system enters error mode to display the cause of error with a number when the system cannot operate CD or stops operation because of an error. The purpose of this measure is to reduce frequency of calls from users asking help for problems that are caused by incorrect operation by user, as well as to assist analysis and repair in servicing.

(1) Basic means of display

- An error code will be written on DMIN (minute area for display) and DSEC (second area for display) when CSMOD (CD mode area for system) is SERBORM.
The same data will be written on DMIN and DSEC.
DTNO shall be blank as before.
 - Display examples of the head unit
Error codes will be displayed as shown below, depending on the capability of LCD. An error number will be displayed in the place of "xx."
 - 8-digit display ERROR-XX
 - 6-digit display ERR-XX or Err-XX
 - 4-digit display E-XX
- With OEM products, display of error codes shall be according to the specificatins of the manufacturer.

(2) Error codes

Error code	Classification	Description	Cause / Detail
10	ELECTRIC	Carriage home failure	Carriage doesn't move to or from the innermost position →Home switch failed and/or carriage immobile
11	ELECTRIC	Focus failure	Focus failed →Defects, disc upside-down, severe vibration
12	ELECTRIC	SETUP failure Subcode failure	Spindle failed to lock or subcode unreadable →Spindle defective, defect, severe vibration
14	ELECTRIC	Mirror failure	Unrecorded CD-R The disc is upside-down, defects, vibration
17	ELECTRIC	Set up failure	AGC protect failed →Defects, disc upside-down, severe vibration
19	ELECTRIC	Improper T.BAL adjustment	Value of T.BAL adjustment is out of parameter.
30	ELECTRIC	Search time out	Failed to reach target address →Carriage / tracking defective and/or defects
A0	SYSTEM	Power failure	Power overvoltage or short circuit detected →Switching transistor defective and/or power abnormal

(4) Number of error codes

One hundred error codes (00 to 99) will be available.

(5) Remarks

- Error codes are not displayed for the mechanism alone (because CD is OFF when an mechanical error is generated).
- When the system cannot read TOC, it is not deemed as an error, and the system continues operation to ■ certain extent.
- Be sure to take measures as shown in the display examples whenever designing a new head unit.
- The first digit of an error code has ■ meaning as follows:
 - 1X : Error related to setup
 - 3X : Error related to the search function
 - AX : Other errors

● New Test Mode

When S-CD is specified as the source, basically the system plays as normal operation. After setup, the system displays the cause and time (absolute time) of an error if focus search is improper, spindle lock is removed, subcode cannot be read, or sound is skipped. During setup, the system displays the operation status of CD control software (internal RAM : CPOINT). The purpose of these displays and functions are to detect aging of servicing, as well as to improve efficiency of defect analysis.

(1) How to enter NEW TEST Mode

1. Reset the system by pressing keys (depending on the product) to enter the conventional Test mode.
 2. Select S-CD as the source by pressing the source or CD key, then inserting a disc. Confirm that the regulator is OFF. Press the Switch Jump Mode key.
 3. After that, the system will stay in the new Test mode, regardless of whether S-CD is OFF or ON.
- To exit from the new Test mode, reset the system.
See the test mode flow chart Page 58.

(2) Relations of keys

keys	Test Mode		New Test Mode	
	Regulator OFF	Regulator ON	PLAY in progress	Error Protection
BAND	To Regulator ON	To Regulator OFF	—	Time / Err No.select
→	—	FWD-Kick	FF / TR+	—
←	—	REV-Kick	REV / TR-	—
1	—	Tracking Close	Scan	—
2	—	Tracking Open	RPT	—
3	—	Focus Close	RDM	—
—	—	Focus Open	—	—
—	—	Jump Off	—	—
⏏	To New Test Mode	Jump Mode select	Auto / Manu	T.No. / Time select

Operations, such as EJECT, CD ON/OFF are performed normal mode.

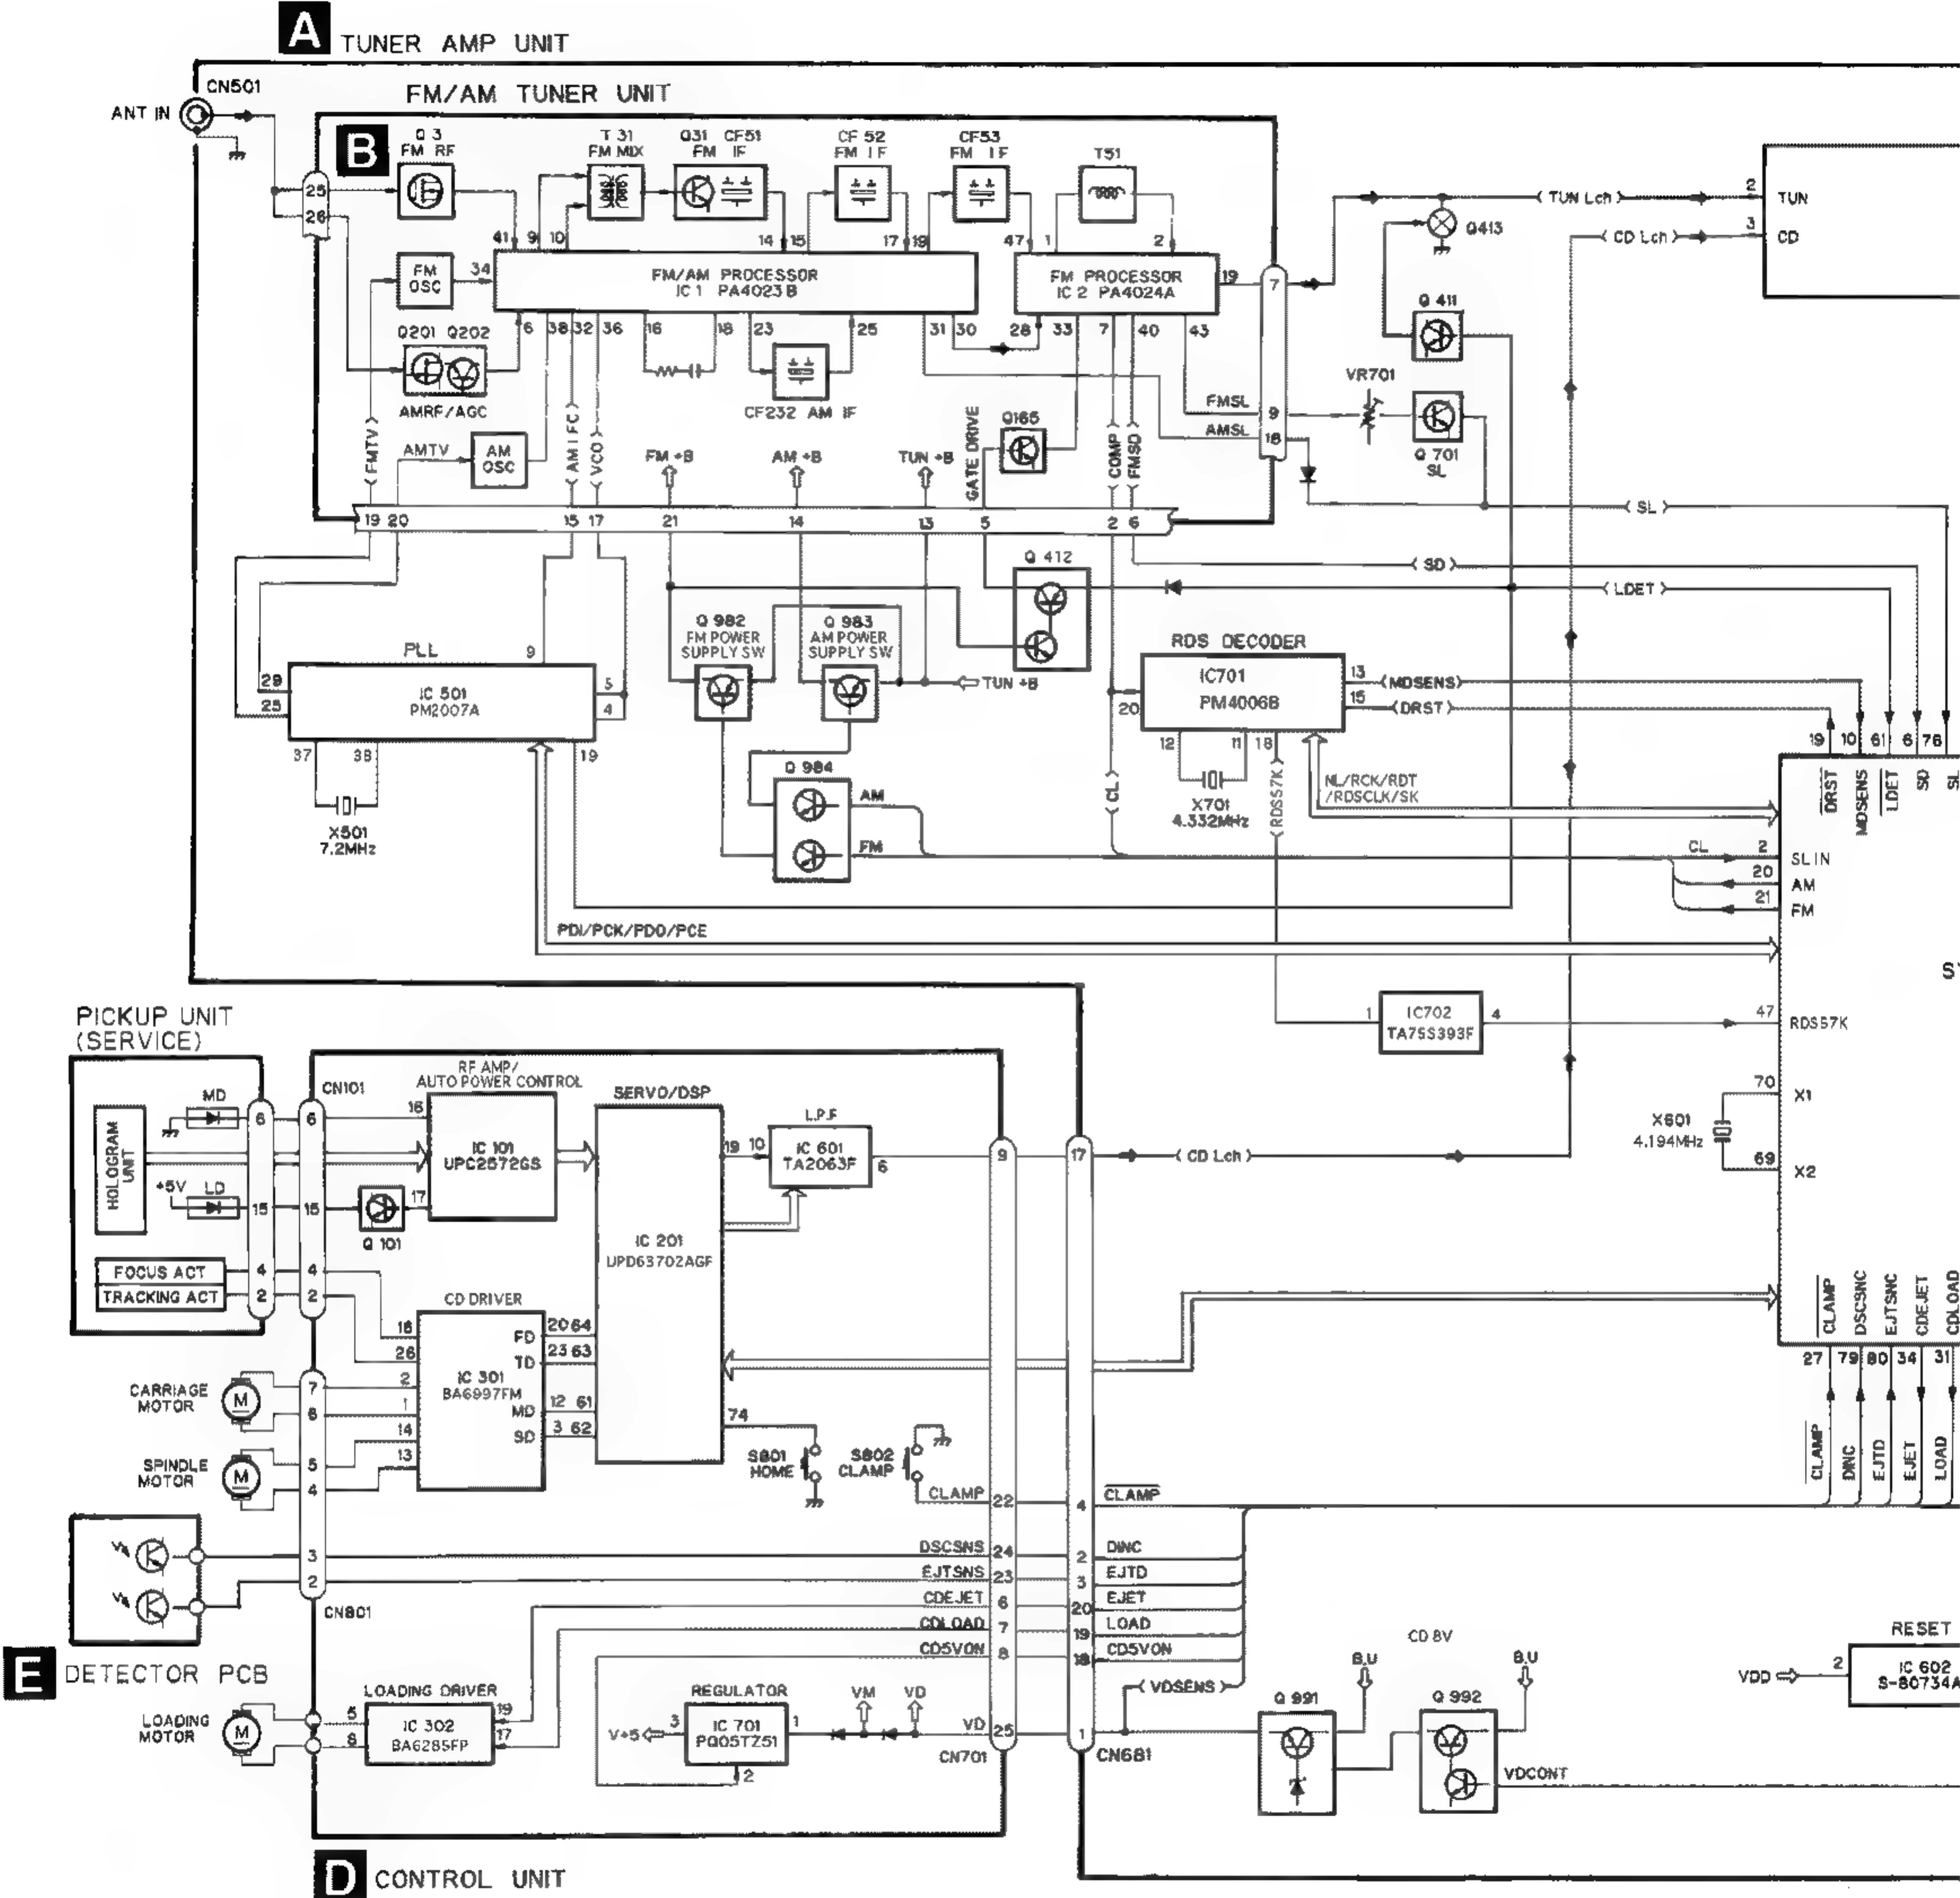

(3) Error Cause, Error Code

Code	Classification	Description	Cause / Details
40	ELECTRIC	Put out of focus	FOK=Low has continued for 100 msec →Damaged or soiled disc. vibration, or detective servo
41	ELECTRIC	Spindle unlock	LOCK=has continued for 100 msec →Damaged or soiled disc. vibration, or detective servo
42	ELECTRIC	Failed to read subcode	The system could not read subcode for 100 msec →Damaged or soiled disc. vibration, or detective servo
43	ELECTRIC	Sound skipped	The last-address-memory function activated →Damaged or soiled disc. vibration, or detective servo

There will be no mechanical error during aging. Error codes should be displayed in the same manner as in Normal mode.

7.3 BLOCK DIAGRAM

● DEH-345R/X1M/EW

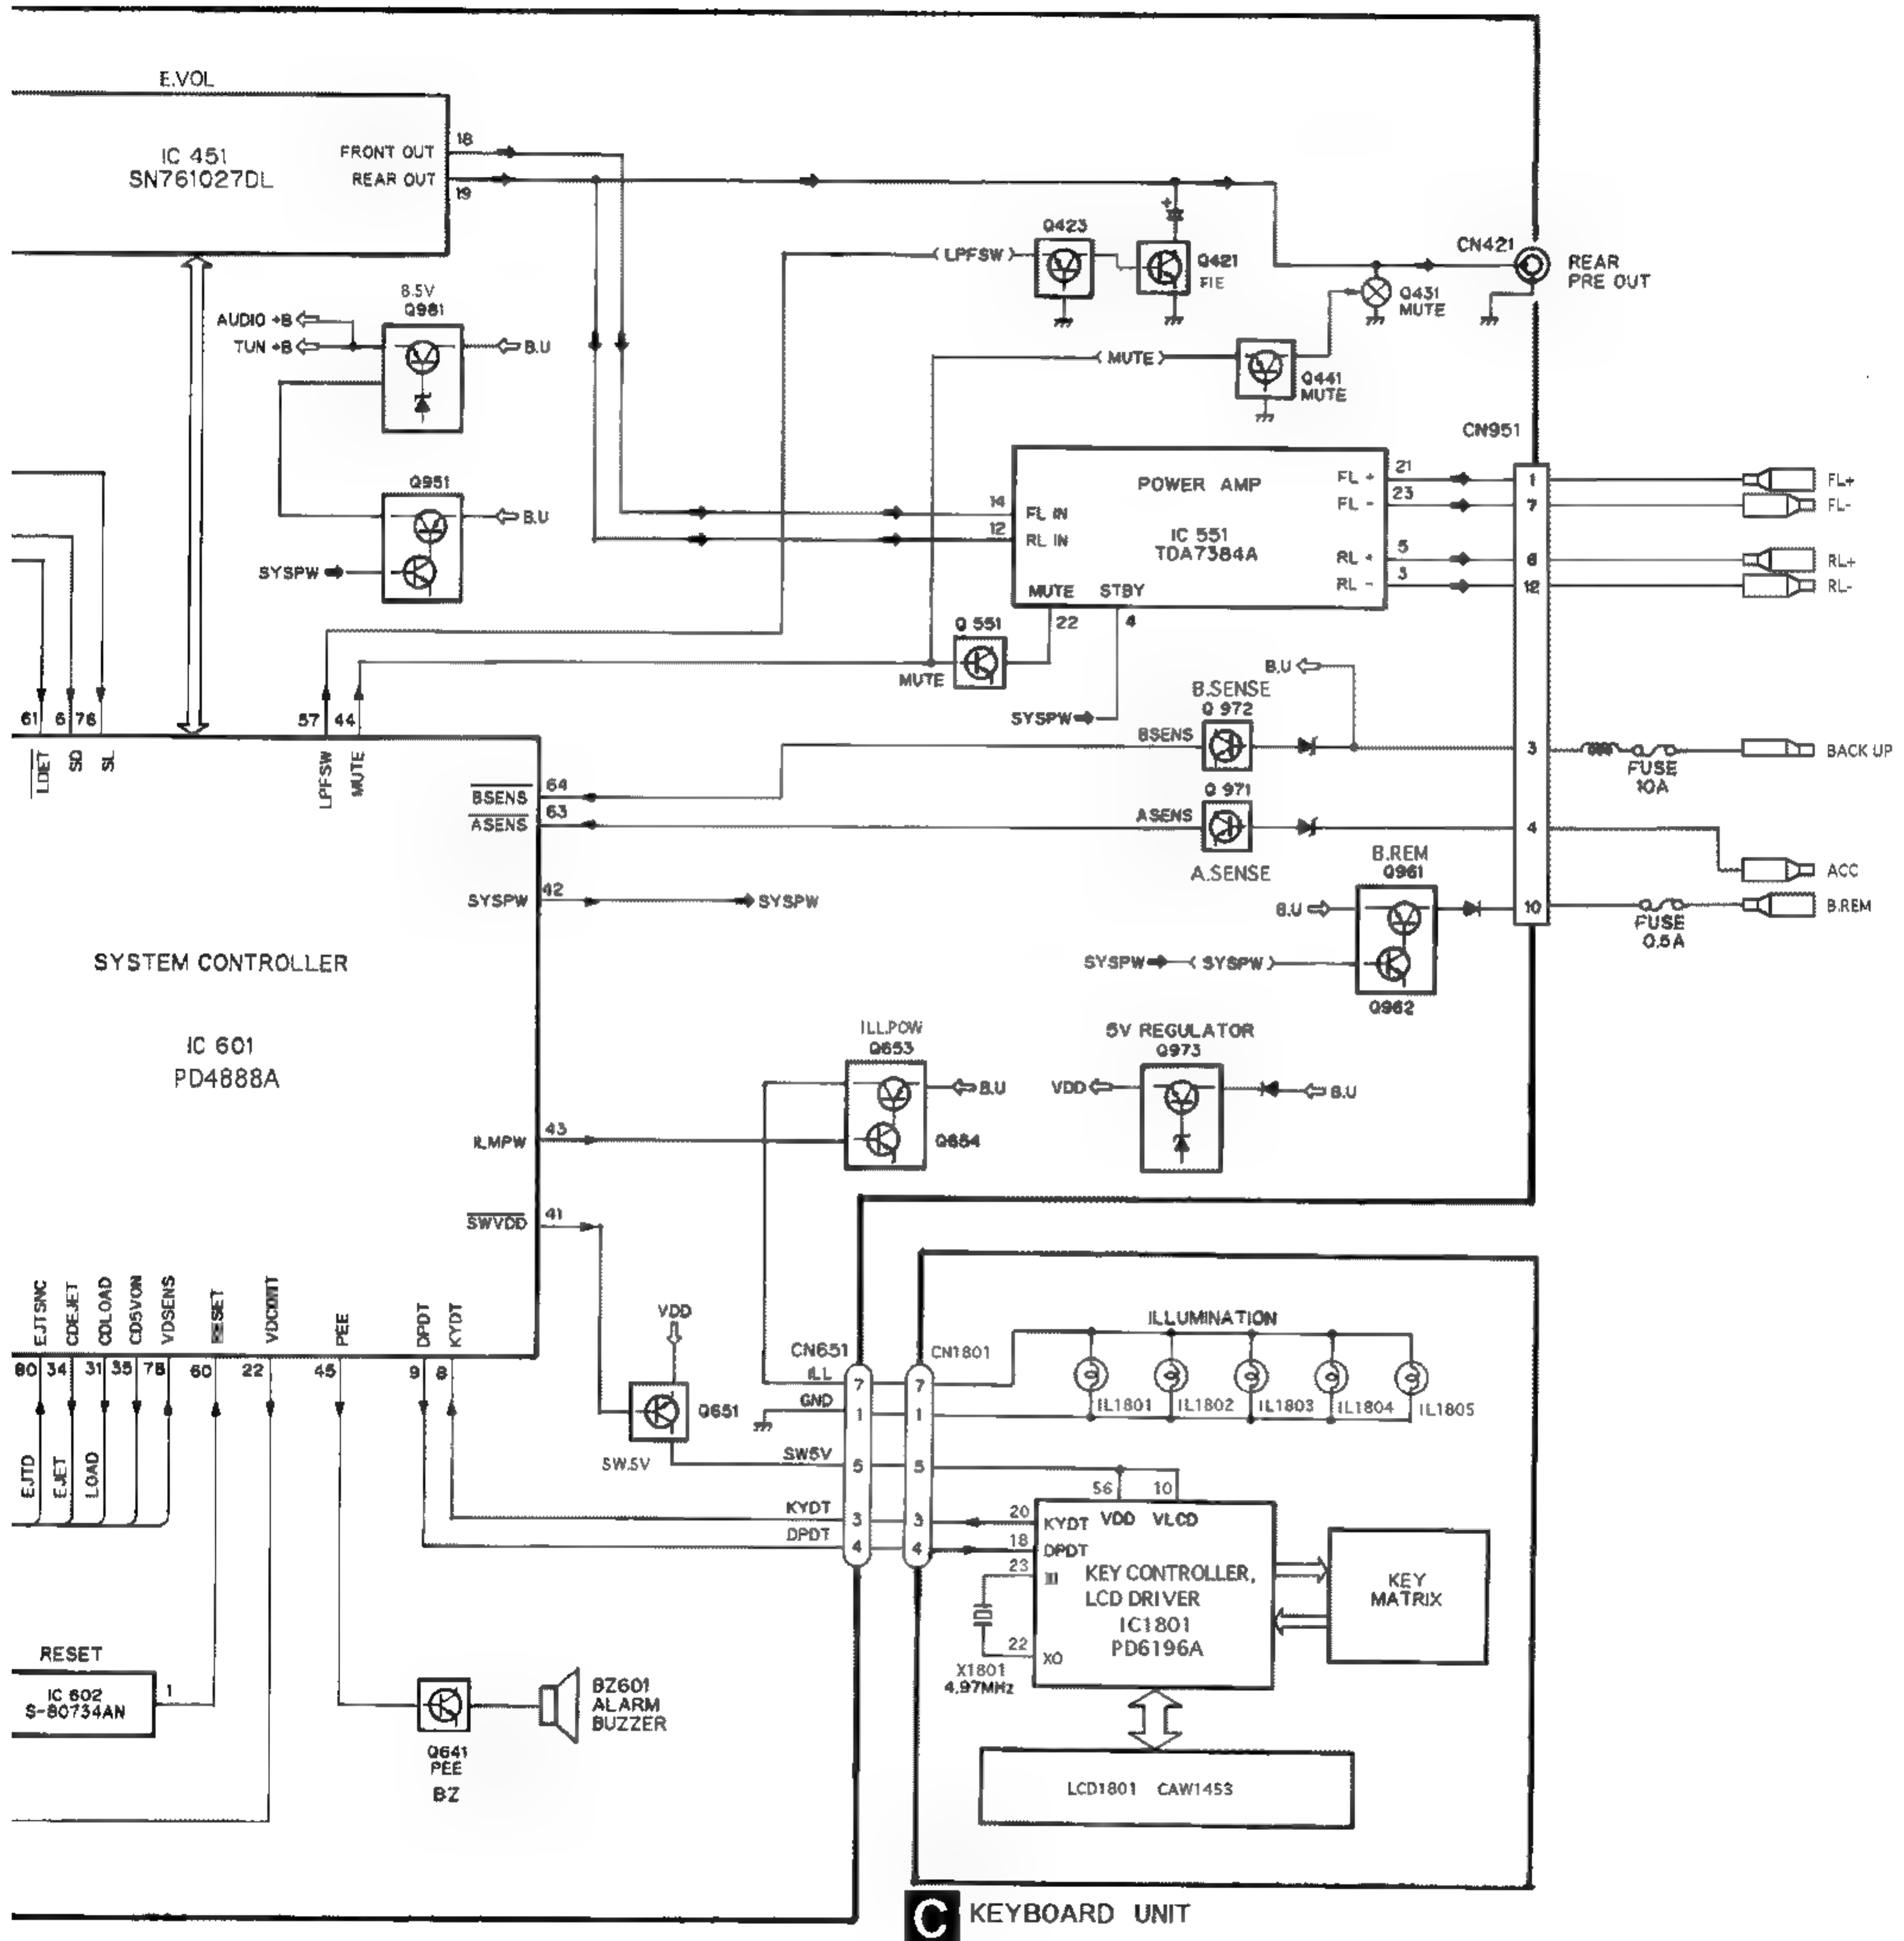

Fig. 28

8. OPERATIONS AND SPECIFICATIONS

Fig. 29

Tuner Operation

Tuner Source and Band

- Push the **SOURCE** button to select **Tuner**.
The program service name or frequency appears on the display.
("CD" indicator lights when stereo station selected.)

- Use the **BAND** button to select the desired band.
(F1, F2, MW/LW)

AF Function Switching

This tuner/CD player's AF function can be switched ON and OFF. AF should be switched OFF for normal tuning operations.

- Press the **AF** button to switch **AF OFF**.
"AF" disappears.
Press the AF button again to switch AF ON.
"AF" appears on the display.

Manual and Seek Tuning

Both Manual (step-by-step) and Seek (automatic) tuning are available.

1. Press the (◀) and (▶) buttons simultaneously to switch alternately between the Manual and Seek tuning modes. The "MANU" indicator lights when Manual tuning is selected and turns OFF when Seek tuning is selected.

2. Press the (▶) button to tune the receiver to a higher frequency. MANU ON (Manual tuning): The frequency changes step by step. MANU OFF (Seek Tuning): The tuner automatically seeks out and receives broadcasting stations.

• Press the (◀) button to tune the receiver to a lower frequency.

Local Seek Tuning

This mode selects only stations with especially strong signals.

To Select Local Mode

- Press the Local button to enter the Local mode. "LOC.S" indicator lights. To cancel the Local mode, press the Local button again.

Adjusting Local Seek Sensitivity

The Sensitivity can be adjusted in 4 steps for FM and 2 steps for MW/LW.

1. Depress the Local button for 2 seconds or longer. The current Local Seek sensitivity (eg. "LOC-2") is displayed. Repeat to switch in and out of the Local Seek Sensitivity setting mode. The display reverts to the previous indication after 5 seconds of inactivity.

2. Use the (◀) button or the (▶) button to raise or lower the sensitivity of Local Mode Seek tuning.

3. Press the Local button to return normal display.

Audio Adjustment

The audio modes are selected for adjustment with the S button. Volume adjustment is the default mode. When another mode is selected for adjustment, the setting returns to the Volume mode after 8 seconds.

Volume Adjustment

- Press the (+) button or the (-) button repeatedly to raise or lower the volume. The display shows low to high volumes from "VOL 00" to "VOL 30."

Note: Holding down the buttons increases or decreases the volume level more rapidly.

Change the Setting Mode

Each time the S button is pressed, the display message and the functions of the (+), (-), (◀) and (▶) buttons change in the following order:
F. I. E. mode → Fader/Balance → Bass/Treble → Loudness.

Using the F. I. E. function

The F. I. E. (Front Image Enhancer) function is a simple method of enhancing front imaging by cutting mid- and high-range frequency output from the rear speakers, limiting their output to low-range frequencies.

Note: When the F. I. E. function is deactivated, the rear speakers output sound in all frequencies, not only bass sounds. Reduce the volume before disengaging F. I. E. to prevent a sudden increase in volume.

- Use the S button to select the F. I. E. mode. "FIE OFF" appears on the display. After adjustment use the S button to return to the normal display.

- Press the (▶) button to activate the F. I. E. function. "FIE ON" appears and "FIE" indicator lights on the display.

- To cancel the F. I. E. function, press the (◀) button. The display message returns to "FIE OFF".

- Use the S button to select the Fader/Balance mode. This function adjusts the front and rear speaker volumes for better balanced listening.

Balance Adjustment

The function allows you to select a Fader/Balance setting that provides ideal listening conditions in all occupied seats.

- Use the S button to select the Fader/Balance mode. "FAD" or "BAL" appears on the display. After adjustment use the S button to return to the normal display.

Audio Adjustment

2. Press the (+) button or the (-) button to shift the balance progressively to the front or rear speakers.
“FAD F15” ~ “FAD R15” is displayed as it moves from front to rear.
Note: “FAD 0” is the proper setting when 2 speakers are in use.

3. Press the (◀) button or the (▶) button to shift the balance to the left or right speaker, respectively.
“BAL L9” ~ “BAL R9” is displayed as it moves from left to right.

Bass/Treble Adjustment

This tuner/CD player is equipped with two tone adjustment modes, the Bass Adjustment and Treble Adjustment modes.

1. Use the S button to select tone adjustment mode.
“BAS” or “TRE” appears on the display.
After adjustment use the S button to return to the normal display.

2. Press the (◀) button or the (▶) button to select “Bass Adjustment mode” or “Treble Adjustment mode”.

3. Press the (+) button or the (-) button, respectively, to increase or decrease the intensity of the bass or treble, whichever is selected.
The display shows “+6” ~ “-6”.

4. Repeat steps 2 – 3 above for the other Bass or Treble Adjustment mode.

Loudness Adjustment

The Loudness function compensates for deficiencies in the low and high sound ranges at low volume.

1. Use the S button to select the Loudness adjustment mode.
“LOUD OFF” appears on the display.
After selection use the S button to return to the normal display.

2. Press the (▶) button to activate the Loudness function.
“LOUD ON” appears on the display.

• To cancel the Loudness function, press the (◀) button.
The display message returns to “LOUD OFF.”

What is RDS?

RDS (Radio Data System) is a system for transmitting data signals along with FM programs. These data signals, which are inaudible, provide a variety of features such as: program service name, program type display, traffic announcement standby, automatic tuning, and program type tuning, intended to aid radio listeners in tuning to a desired station.

Notes:

- 1. RDS service may not be provided by all stations.
- 2. RDS functions, like AF and TA, are only active when your radio is tuned to RDS stations.

Program Service Name Display

With this function, the names of networks/stations providing RDS services replace the frequency on the display a few seconds after they are tuned in.

Displaying the Frequency

- Hold down the BAND button for 2 seconds or longer.
The frequency of the current station is displayed until the button is released.

Displaying PTY Information

- Press the TA button for 2 seconds or longer.
PTY information for the currently tuned station appears on the display for 8 seconds.

AF Function

The AF (Alternative Frequencies search) function is used to search for other frequencies in the same network as the currently tuned frequency. It automatically mutes the sound and retunes the receiver to another frequency in the network which is broadcasting a stronger signal when there are problems with reception of the currently tuned station or better reception is possible on a different frequency.

Activating/deactivating the AF Function

AF is set to ON by default.

- Press the AF button to turn AF to OFF.
The "AF" indicator light is extinguished.

- Press the AF button again to turn AF back ON.

The "AF" indicator lights.

Notes:

1. When you recall a preset station, the tuner may update the preset station with a new frequency from the station's AF list. No preset number appears on the display if the RDS data for the station received differs from that for the originally input station.
2. Sound may be temporarily interrupted by another program during an AF frequency search.
3. AF can be switched ON or OFF independently for each FM band.
4. AF tunes the receiver only to RDS stations when you use Seek tuning or BSM Auto Memory with the "AF" indicator ON.
5. When the tuner is tuned to a non-RDS station, the "AF" indicator flashes.

PI Seek function

The tuner searches for another frequency broadcasting the same programming. "PI SEEK" appears on the display and the radio volume is muted during a PI Seek. The muting is discontinued after completion of the PI Seek, whether or not the PI seek has succeeded. If the PI seek is unsuccessful, the tuner returns to the previous frequency.

Auto PI Seek

If the tuner fails to locate a suitable alternative frequency or the broadcasting signal is too weak for proper reception, the PI Seek will automatically start.

Preset Station PI Seek

When preset stations cannot be recalled, as when traveling long distances, the unit can be set to perform PI Seek also during preset recall. The default setting for PI Seek is OFF.

- To switch PI Seek ON, hold down button 2 while turning the ignition key from OFF (Lock) to ON (ACC).
To switch PI Seek OFF, repeat the preceding operation.

REG Function

When AF is used to retune the tuner automatically, REG (regional) limits the selection to stations broadcasting regional programming.

Activating/Deactivating REG

The REG function can be turned ON or OFF independently for each FM band.

- To activate REG, press the AF button for 2 seconds or longer in an FM band.
The "REG" indicator lights.

- To exit the REG mode, press the AF button for 2 seconds or longer again.
The "REG" indicator is extinguished.

Notes:

1. Regional programming and regional networks are organized differently depending on the country (i.e., they may change according to the hour, state or broadcast area).
2. The preset number may disappear on the display if the tuner tunes in a regional station which differs from the originally set station.

TA Function

The TA (Traffic Announcement standby) function to let you tune in traffic announcements automatically, no matter what source (tuner or built-in CD player) you are listening to. The TA function can be activated for either a TP station (a station that broadcasts traffic information) or an EON TP station (a station carrying information which cross-references TP stations).

Activating/Deactivating the TA Function

- Tune in a TP or EON TP station.
The "TP" indicator lights when the tuner is tuned to a TP station, and both the "EON" and "TP" indicators light when it is tuned to an EON TP station.

- Press the TA button.
The "TA" indicator lights, indicating that the tuner is waiting for traffic announcements.

- Press the TA button again when no traffic announcement is being received to deactivate the TA function.

Notes:

1. Only the (+), (-), TA, AF and SOURCE buttons can be used during traffic announcement reception.
2. The system switches back to the original source following traffic announcement reception.
3. The TA function can be activated from the built-in CD player mode if the tuner was last set to the FM band but not if it was last set to the MW/LW band.
4. If the tuner was last set to FM, turning on the TA function lets you operate other tuning functions while listening to a CD.
5. Only TP or EON-TP stations are tuned in the Seek Tuning mode when the "TA" indicator is ON.
6. Only TP or EON-TP stations are stored by BSM when the "TA" indicator is ON.

Using RDS Functions

Canceling Traffic Announcements

- Press the **TA** button while a traffic announcement is being received to cancel the announcement and return to the original source.

The announcement is canceled but the tuner remains in the TA mode until the TA button is pressed again.

Adjusting the TA Volume

When a traffic announcement begins, the volume adjusts automatically to a preset level to enable you to hear the announcement clearly.

- Using the (+) or (–) buttons to set the volume by adjusting it during traffic announcement reception.

The newly set volume is stored in memory and recalled for subsequent traffic announcements.

TP Alarm function

About 30 seconds after the “TP” or “EON” indicator is extinguished due to a weak signal, a 5 second beep sounds to remind you to select another station.

- If you are listening to the tuner, tune in another TP station.

In the built-in CD player mode, the tuner automatically seeks out the TP station with the strongest signal in the current area 10 (or 30)* seconds after “TP” disappears from the display.

* Time taken before Seek begins.

TA function ON	10 seconds
TA, AF functions ON	30 seconds

PTY Function

The PTY function enables you to select stations by the type of programming they broadcast (PTY Search). It also provides automatic tuning for emergency broadcasts (PTY Alarm).

Note:

1. PTY code program types are as follows:
 1. NEWS: News.
 2. AFFAIRS: Current affairs.
 3. INFO: General information and advice.
 4. SPORT: Sports programs.
 5. EDUCATE: Educational programs.
 6. DRAMA: All radio plays and serials.
 7. CULTURE: Programs concerned with any aspect of national or regional culture.
 8. SCIENCE: Programs about nature, science and technology.
 9. VARIED: Light entertainment programs.
 10. POP MUS: Popular music.
 11. ROCK MUS: Contemporary modern music.
 12. EASY MUS: Easy listening music.
 13. L. CLASS: Light classical music.
 14. CLASSICS: Serious classical music.
 15. OTH MUS: Other types of music, which can't be categorized.
 16. WEATHER: Weather reports/Meteorological information.
 17. FINANCE: Stock market reports, commerce, trading etc.
 18. CHILDREN: Children's programs.
 19. SOCIAL: Social affairs programs.
 20. RELIGION: Religion affairs programs or services.
 21. PHONE IN: Phone in based programs.
 22. TOURING: Travel programs, not for announcements about traffic problem.
 23. LEISURE: Programs about hobbies and recreational activities.
 24. JAZZ: Jazz music based programs.
 25. COUNTRY: Country music based programs.
 26. NAT MUS: National music based programs.
 27. OLDIES: Oldies music, 'Golden age' based programs.
 28. FOLK MUS: Folk music based programs.
 29. DOCUMENT: Documentary programs.
2. If a PTY code of zero is received from a station, “NONE” will be displayed. This indicates that the station has not defined its program contents.
3. If the signal is too weak for this product to pick up the PTY code, “NO PTY” will be displayed.

- To stop CD playback, press the **SOURCE** button to select tuner or turn the source **OFF**.
When the built-in CD player is selected again, playback begins at approximately the same place (track/playing time).
-
- Precaution:**
- * Inserting more than one disc at a time may damage the built-in CD player.
 - * Discs left partially inserted after ejection may incur damage or fall out.
 - * If a disc cannot be inserted fully or playback fails, make sure the recorded side is down, push the Eject button and check the disc for damage before reinserting it.
 - * If a CD is inserted with the recorded side up, it will be ejected automatically after a few moments.
 - * If the built-in CD player cannot operate properly, an error message (such as **ERROR-14**) appears on the display.

- Track Search and Fast-forward/Reverse**
- Switching the Mode**
- Press the (◀) and (▶) buttons simultaneously to switch between “MANU” indicator ON and OFF.
When performing a Track Search, switch the “MANU” indicator OFF.
When performing Fast-forward/Reverse operations, switch the “MANU” indicator ON.

- Track Search**
- This feature permits you to select a specific track on the CD by number.
- **Press the (◀) button or the (▶) button to reverse or advance track by track.**
Hold down the button continuously for high-speed forward or reverse track searching. The track number and playing time change appropriately on the display.

- Fast-forward/Reverse**
- This feature enables you to advance or reverse at high speed between tracks.
- **Press the (◀) or (▶) button to reverse or fast-forward through tracks.**
When the beginning or end of a track is reached, playback skips to the next track. The track number and playing time change appropriately on the display.
Note: The audio is audible as a high-pitched screeching during fast-forward and reverse.

Using the Built-in CD Player

Pause

- Press **button 1** to stop playback temporarily. "PAUSE" is displayed. Push the button again to restart playback.

Built-in CD Player Repeat Modes

The built-in CD player offers two repeat modes: Disc Repeat (normal play), the default mode, and One-track Repeat.

- To select **One-track Repeat**, press **button 2**.

"RPT" appears on the display.

Note: When Track Number Search or fast forward/reverse is performed, the mode returns to the default Disc Repeat mode (normal play).

- Press **button 2** again to return to the Disc Repeat mode (normal play).

"RPT" disappears.

Random Play

The Random Play mode plays the tracks on a CD in random order for variety.

- To enter the **Random Play** mode, press **button 3**.

"RDM" appears on the display.

- Press **button 3** again to cancel **Random Play**.

Note: Since playback is random, the same track may be repeated consecutively.

Scan Play

Scan Play plays the first 10 seconds or so of each track on a CD in succession.

- Press **button 4** to start **Scan Play**. "SCAN" appears on the display.

- Push **button 4** again to cancel **Scan Play** when you hear a track you are want to listen to.

Playback of the current track continues.

Note: Scan Play is canceled automatically after all the tracks on a disc have been scanned.

Specifications

General

Power source	14.4 V DC (10.8 — 15.1 V allowable)
Grounding system	Negative type
Max. current consumption	10.0 A
Dimensions	
(mounting size)	178 (W) × 50 (H) × 150 (D) mm
(front face)	188 (W) × 58 (H) × 22 (D) mm
Weight	1.5 kg

Amplifier

Maximum power output	35 W × 4
Continuous power output	22 W × 4 (DIN45324, +B=14.4 V)
Load impedance	4 Ω (4 — 8 Ω allowable)
Preout output level/output impedance	500 mV/ 1 kΩ
Tone controls	
(Bass)	±12 dB (100 Hz)
(Treble)	±12 dB (10 kHz)
Loudness contour	+10 dB (100 Hz), +7 dB (10 kHz) (volume: -30 dB)

Specifications

CD player

System	Compact disc audio system
Usable discs	Compact disc
Signal format	Sampling frequency: 44.1 kHz Number of quantization bits: 16; linear
Frequency characteristics	5 — 20,000 Hz (±1 dB)
Signal-to-noise ratio	94 dB (1 kHz)(IEC-A network)
Dynamic range	90 dB (1 kHz)
Number of channels	2 (stereo)

FM tuner

Frequency range	87.5 — 108 MHz
Usable sensitivity	11 dBf (1.0 μV/75 Ω, mono, S/N: 30 dB)
50 dB quieting sensitivity	16 dBf (1.7 μV/75 Ω, mono)
Signal-to-noise ratio	70 dB (IEC-A network)
Distortion	0.3% (at 65 dBf, 1 kHz, stereo)
Frequency response	30 — 15,000 Hz (±3 dB)
Stereo separation	40 dB (at 65 dBf, 1 kHz)

MW tuner

Frequency range	531 — 1,602 kHz
Usable sensitivity	18 μV (25 dB) (S/N: 20 dB)
Selectivity	50 dB (±9 kHz)

LW tuner

Frequency range	153 — 281 kHz
Usable sensitivity	30 μV (30 dB) (S/N: 20 dB)
Selectivity	50 dB (±9 kHz)

Note:

Specifications and the design are subject to possible modification without notice due to improvements.
